

Cots

SAFETY

Children's safety is always our highest priority. Our products are designed and tested to comply with all applicable safety requirements in the countries where the products are sold. We also test all our children's products at our own accredited test laboratory in Sweden, as well as at independent accredited test laboratories and institutes around the world. IKEA fulfills the following safety criteria for cots and mattresses around the world: Cots for the European market are tested by test laboratories in Europe and comply with European standard EN 716-1. Mattresses for the European market are tested by test laboratories in Europe and comply with European standard. If you want to learn more about a specific safety or test standard, please contact the Consumer Protection Association or the authority that has issued the standard.

How are our cots tested?

All our cots undergo several different tests to ensure they are safe to use. First, they are inspected for any protruding parts, loose parts or fittings, and sharp edges. Then, all gaps and openings between spindles and the slats in the bed base are measured. The cot is tested with impact and pressure tests for strength, stability and durability and to ensure that the spindles will not twist or rotate from their position and create potentially hazardous openings. The bed base is also tested. For example, in a test for the European market, we subject the bed base to impact from a 10 kg weight that is dropped 1,000 times from five different positions. The same or similar tests are made on bed bases for cots on all markets where we are active, but the tests may differ somewhat, depending on the specific requirements of the respective country.

Security for babies and parents

That your baby can sleep safely and securely is as important to us as it is to you. That's why all our cots must withstand the toughest safety tests in the world. And even if you may have a hard time believing it right now, your baby will grow – quickly. He or she may even try to climb out of bed on their own, with the risk of falling. Then it can be reassuring to know that you can lower the bed base on most of our cots or remove one side completely. We did everything we could so both you and your baby can sleep well.

Safety down to the smallest detail

No matter which of our cots you choose, you can be sure of one thing – every detail is well-thought-out. The distance between the slats, the non-toxic and durable materials, the rounded shapes and bed bases with good ventilation, which gives your baby a pleasant sleeping climate. What's more, many of the cots belong to a series, which means that you can furnish your child's entire room in the same style.

COTS

GONATT cot 60×120 cm.

The cot base can be placed at two different heights. One cot side can be removed when the child is big enough to climb into/out of the cot. Your baby will sleep both safely and comfortably as the durable materials in the cot base have been tested to ensure they give their body the support it needs. The cot base is well ventilated for good air circulation which gives your child a pleasant sleeping climate.

HOW TO CHOOSE

1. Choose your materials.

Choose between spring, latex or foam. All are safe and hygienic. If you are unsure ask yourself, what type of mattress do you prefer to sleep on?

Spring: VYSSA spring mattresses are made with either pocket or bonell spring construction. The construction of spring cot mattresses allows air to flow freely, promoting good air circulation and a favourable sleeping climate. Both sides may be slept on, which prolongs their use, and protective foam box for added comfort and durability.

Latex: Only synthetic latex, which is designed for babies to sleep on, is used in VYSSA latex mattresses; it is extremely durable and promotes a healthy sleeping environment, as babies may be allergic to natural latex. Latex provides additional pressure relief for extra comfort, and both sides may be slept on, which prolongs their use.

Foam: All VYSSA foam mattresses use quality polyurethane or high resilience foam, which are well cut, durable and intended for sleeping therefore making both a safe choice for cot mattresses. High resilience foam is durable, relieves pressure points, and provides comfort and support for your growing baby. Both sides of our foam mattresses may be slept on, which prolongs their use.

Covers: All covers are removable and machine-washable to create a hygienic sleeping environment for your baby. They are also well ventilated to allow for better air circulation. Some VYSSA mattresses have jersey and velour covers for a softer feeling. All our covers are soft against the baby's skin.

2. Identify individual needs

Time: How many years do you think you will use your cot mattress? The longer you plan on keeping the same mattress will affect which mattress you should choose. If you want to use the same mattress into the toddler years a thicker and more durable mattress will provide better support for older babies and toddlers, who like to stand and bounce in their cots.

Added benefits: All cot mattresses must be firm, and promote good air circulation for safety and hygiene. In addition to these features:

- Air circulation: All VYSSA cot mattresses promote good air circulation, thanks to materials like egg-carton foam, pocket spring construction or latex.
- Pressure relief: All VYSSA mattresses provide some pressure relief, because they are made with materials like pocket springs, high resilience foam or latex.
- Initial softness: All cot mattresses must be firm to provide a safe sleeping environment for your baby. Some covers are quilted, which adds an initial feeling of softness. This makes the mattress soft to the touch, while remaining firm.

3. Choose your mattress

On the following pages you will find all of our cot mattresses on offer, along with detailed facts for each.

FOAM MATTRESSES

VYSSA SKÖNT. Thickness: 9 cm. White. High resilience foam with pressure-relieving capacity provides good comfort for your baby. A durable mattress that can be used for a longer period of time.

Material: High resilience foam and jersey cover.

VYSSA SNOSA. Thickness: 10 cm. White. This mattress has two different comfort surfaces: the eggbox-shaped surface creates more ventilation and is more pressure relieving than the flat side.

Material: Polyurethane foam and cotton/ polyester cover.

VYSSA SLAPPNA. Thickness: 7 cm. White. Suitable for infants and young babies.

Material: Polyurethane foam and non woven cover.

SPRING MATTRESSES

VYSSA VACKERT. Thickness: 10 cm. Blue. A durable pocket spring mattress that provides very precise support for your baby's body, and can be used for a longer period of time. The spring construction allows air to flow freely, creating better ventilation and a favourable sleeping climate. Protective foam box for added comfort and durability.

Material: Pocket springs and velour cover.

VYSSA VINKA. Thickness: 12 cm. Blue. Bonell springs provide great comfort and high air circulation. A durable mattress that can be used for a longer period of time. Protective foam box and felt liner for added comfort and durability.

Material: Bonell springs and jersey cover.

LATEX MATTRESSES

VYSSA SOMNAT. Thickness: 10 cm. White. Latex provides excellent pressure-relieving capacity, enabling your baby's body to relax more fully. A durable mattress that can be used for a longer period of time. This mattress has multiple air canals for high air circulation; helps keep the mattress dry, fresh and cool.

Material: Synthetic latex and velour cover.
