English

Handle with care! A damaged edge or scratched surface can in exceptional cases cause the glass to crack suddenly. However, rarely into sharp fragments and only into small pieces. Avoid collisions from the side – this is where the glass is most vulnerable.

Deutsch

Vorsichtig hantieren! Kratzer oder beschädigte Kanten können im Ausnahmefall zum Springen des Glases führen. Dabei entstehen sehr selten scharfe Splitter, eher kleine Scherben. Seitlichen Aufprall vermeiden; an den Kanten ist das Glas besonders empfindlich.

Français

À manipuler avec précaution ! A cause d'un bord abîmé ou d'une surface rayée, le verre peut exceptionnellement se briser brusquement, mais rarement en fragments pointus et seulement en petits morceaux. Éviter tout choc latéral, le verre étant moins résistant sur les bords.

Nederlands

Voorzichtig hanteren! Een beschadigde rand of een kras op het oppervlak kan er in uitzonderingsgevallen toe leiden dat het glas plotseling versplinterd. Maar alleen in kleine stukjes, nooit in scherpe scherven. Voorkom stoten tegen de zijkant - daar is het glas het gevoeligst.

Dansk

Skal håndteres forsigtigt! Glasset kan i sjældne tilfælde pludselig gå i stykker, hvis kanten er beskadiget, eller overfladen er ridset. Glasset splinterer dog kun i små dele, sjældent i skarpe glasskår. Undgå stød fra siden, hvor glasset er mest skrøbeligt.

Íslenska

Farið varlega! Skemmdur kantur eða skráma á yfirborðinu getur í einstaka tilfellum valdið því að glerið bresti óvænt. Hinsvegar brotnar glerið sjaldan í hvöss brot og aðeins í lítl brot. Forðist högg á hliðarnar - þar er glerið viðkvæmast.

Norsk

Må håndteres varsomt! En skadet kant eller ripet overflate kan i noen tilfeller plutselig få glasset til å knuse. Men sjeldent i skarpe skår, bare i små biter. Unngå kollisjoner fra siden – det er her glasset er mest sårbart.

Suomi

Käsiteltävä varoen! Reunan vaarioituminen tai pinnan naarmuuntuminen saattaa poikkeustapauksissa rikkoo lasin. Lasi ei kuitenkaan yleensä hajoa teräviksi sirpaleiksi, vaan useimmiten pieneksi muruksi. Suojaaa lasia sivusta tulevilta iskuilta, sillä reunat ovat lasin heikoin kohta.

Svenska

Hanteras varsamt! En skadad kant eller repad yta kan i undantagsfall få glaset att plötsligt spricka. Dock nästan aldrig till vassa delar, embart till små bitar. Undvik kollisioner från sidan - det är där glaset är mest ömtåligt.

Česky

S tvrzeným sklem zacházejte opatrň! Poškozená hrana nebo poškrábáný povrch může ve výjimečných případech způsobit náhlé prasknutí skla. Tvrzené sklo se však jen zřídka rozbituje na ostré strypy, ale rozpadne se pouze na malé kousky. Vyuvarujte se nárazu z boku – tam je sklo nejnáhylnější k rozbití.

Español

¡Manipular con precaución! En casos excepcionales, un borde dañado o una superficie rayada puede provocar la rotura brusca del vidrio. Raramente se romperá en fragmentos afilados y generalmente en trozos pequeños. Evita los impactos laterales, porque es la zona más vulnerable del vidrio.

Italiano

Da maneggiare con cautela! Danni sul bordo o scalfitte sulla superficie possono, in rari casi, causare la rottura improvvisa del vetro in piccoli pezzi. Raramente si formano schegge affilate. Evita urti sui lati, dove il vetro è più fragile.

Magyar

Óvatosan bánj vele! Ritkán előfordulhat, hogy a sérült szélek vagy a megkarcolt felület hirtelen az üveg megrepedését okozhatja. Ilyenkor csak nagyon ritkán esik éles darabokra - többnyire apró darabok hullik. Vigyázz, hogy ne ütődjön neki semminék oldalirányból - az üveg így a legsérülékenyebb.

Polski

Należy obchodzić się ostrożnie! Uszkodzona krawędź lub zarysowana powierzchnia może w wyjątkowych przypadkach spowodować nagłe pęknięcie szkła. Rzadko jednak na ostrze odłamki, a jedynie na małe kawałki. Unikaj uderzenia z boku - w tym miejscu szkło jest narażone najbardziej.

Eesti

Kasutage ettevaatlikult! Kahjustatud äär või kriimustatud pind võib erakordset juhtudel põhjustada klaasi järsu pragunemise. Siiski, harva puruneb see väikesteks tükkeideks. Vältige kokkupõrget külgedega - seal on klaas kõige nõrgem.

Latviešu

Apieties uzmanīgi! Ľoti retos gadījumos bojātas malas vai noskrāpēta virsma var izraisīt peķšņu stikla saplaisāšanu. Stikls saplīst mazos gabaliņos, kas parasti nav asi. Izvairieties no trieciena pa malām - tieši malās stiklis ir vistrauslākais.

Lietuvių

Atsargiai elkitės su grūdintu stiklu! Pažeidus stiklinio gaminio kraštą ar dėl atsiradusių įbrėžinių, jis gali netikėtai suskilti ar sudūžti. Dažniausiai grūdintas stiklas dūžta į mažas, neaštrias šukes. Kraštai yra pažeidžiamiausi, ypač juos sutrenkus, todėl būkite atidū.

Portugues

Deve manipular-se com cuidado! Em casos excepcionais, um rebordo danificado ou uma superfície riscada podem levar a que o vidro se parte de repente. Contudo, o vidro raramente se parte em fragmentos afiados, apenas em pedaços pequenos. Evite embates laterais – este é o ponto mais vulnerável do vidro.

Româna

Manevreză cu grijă! O margine deteriorată sau suprafața zgâriată pot, în cazuri excepționale, să ducă la spargerea sticlei. Cu toate acestea, sticla nu se va sparge în fragmente ascuțite. Evită lovirea dintr-o parte - este locul unde sticla este sensibilă.

Slovensky

Zaobchádzajte opatrne! Poškodená hrana alebo poškriabaný povrch môže v niektorých prípadoch spôsobiť prasknutie skla. Sklo sa väčšinou popraská na malé kúsky, hoci občas sa môže prasknúť na ostré kúsky. Vyuvarujte sa nárazom zo strán - tu býva sklo najviac citlivé.

Български

Бъдете внимателни, когато боравите с артикула! В редки случаи повреденият ръб или надрасканата повърхност могат да причинят внезапно счупване на стъклото - но рядко на остра частици и само на малки парченца. Избегвайте странични удари - това е най-уязвимото място за стъклото.

Hrvatski

Pažljivo postupati! Oštećeni rub ili ogrebana površina mogu u posebnim slučajevima izazvati iznenadno pucanje stakla. Međutim, rijetko u oštrem komadu, već u sitne komadiće. Izbjegavati udarce sa strana – na stranama se staklo najlakše oštetiti.

Ελληνικά

Χειρίστετε το με προσοχή! Μία φθαρμένη άκρη ή μια γρατζουνισμένη επιφάνεια, μπορεί σε εξαιρετικές περιπτώσεις, να προκαλέσει το ξαφνικό σπάσμο του γυαλιού. Παρόλα αυτά, σπάνια σε αιχμηρά θραύσματα και μόνο σε μικρά κομμάτια. Αποφύγετε προσκρούσεις στις πλαϊνές πλευρές, καθώς εκεί το γυαλί είναι πιο ευάλωτο.

Русский

Обращаться с осторожностью! Из-за поврежденных краев или царапин на поверхности стекло может внезапно треснуть. Однако иногда стекло может рассыпаться на мелкие острые осколки. Избегайте ударов сбоку, там стекло наиболее уязвимо.

Українська

Використовуйте обережно! Пошкоджений край або подряпана поверхня у виняткових випадках можуть привести до раптової появи тріщин у склі. Однак утворені скалки дрібні та здебільшого негострі. Уникайте ударів бічних поверхонь — скло можна пошкодити.

Srpski

Rukuj pažljivo! Oštećena ivica ili izgredana površina mogu u izuzetnim slučajevima dovesti do iznenadnog pucanja stakla. Retko u oštrem delovu i isključivo na sitne. Zaštiti od udaraca sa strane, jer je tu staklo najtanje.

Slovenščina

Ravnaj previdno! Zaradi poškodovanega roba ali praske lahko steklo v izjemnih primerih nenadoma poči. Vendar pa se pri tem razbijje na drobne koščke, ne na ostre kose. Izogibaj se udarcem s strani – steklo je namreč tu najbolj občutljivo.

Türkçe

Dikkatli tutunuz! Bazı durumlarda hasarlı kenar veya çizik yüzey, camın aniden çatlamasına sebep olabilir. Ancak nadiren keskin parçalara bölünür, genel olarak sadece küçük parçalar halinde bölünür. Camın en hassas yeri olduğundan kenarları çarpmalara karşı koruyunuz.

中文

小心轻放！边缘损坏或表面划伤在特殊的情况下会造成玻璃突然破裂。但是，鲜少出现锋利碎片，多为小碎块。请避免侧面冲撞——此乃玻璃脆弱处。

繁中

小心使用！破損邊緣或已刮傷表面，可能會造成強化玻璃突然破裂，但只會碎成顆粒狀，不會造成尖銳碎片。強化玻璃的側邊是最容易受損的位置，須避免碰撞。

한국어

취급주의! 가장자리가 손상되거나 표면이 긁혔을 경우 갑자기 유리가 깨지는 경우가 있습니다. 대개의 경우 파편은 날카롭고 큰 조각보다 작은 조각으로 부서집니다. 유리 측면은 가장 약한 부분이므로 특히 충돌에 주의해주세요.

日本語

お取り扱いにはご注意ください！角が欠けたり表面に傷がついたガラスは、突然割れる危険があります。強化ガラスは割れると、鋭利な破片が生じることはまれで、通常は細かな粒状になります。ガラスは横からの衝撃に弱いため、注意してください。

Bahasa Indonesia

Barang pecah belah! Permukaan yang rusak atau tergores dapat mengakibatkan kaca retak secara tiba-tiba. Pecahan kaca kecil dan tidak tajam. Hindari kaca terbentur dari samping karena kaca paling rentan dari sisi ini.

Bahasa Malaysia

Kendali dengan berhati-hati! Tepi yang rosak atau permukaan yang tercalar boleh dalam keadaan tertentu menyebabkan kaca retak dengan tiba-tiba. Walau bagaimanapun, jarang menjadi serpihan tajam, hanya kepingan kecil. Elakkan daripada terlanggar dari sisi - di mana kaca paling mudah pecah.

عربی

ينبغي مناولة المنتج بعناية! الحافة المكسورة أو السطح المخدوش يمكن في حالات استثنائية أن يؤدي إلى تصدع الزجاج على نحو مفاجئ، ولكن ليس إلى أجزاء حادة، بل إلى قطع صغيرة فقط. ينبغي لا يتعزّز المنتج للاصطدام من الجانب - فهذا هو المكان الأكثر ضعفاً في الزجاج.

ไทย

โปรดใช้อุปกรณ์น้ำดื่ม ในบางกรณีหากหักขอบได้รับความเสียหายหรือพื้นผิวน้ำดื่มน้ำจะทำให้กระแทกที่แข็งแรงและได้ในทันทีและแตกเป็นชิ้นส่วนเล็กๆ ไม่แหลมคม ระวังไม่ให้มีการกระแทกจากด้านข้าง เพราะเป็นส่วนที่บอบบางที่สุดของกระบอก

Tiếng Việt

Xử lí cẩn thận! Cạnh kính bị hư hỏng hoặc bể mặt bị trầy xước có thể làm kính nứt và/hoặc vỡ đột ngột. Tuy nhiên, kính sẽ không vỡ thành các mảnh sắc nhọn, kính chỉ vỡ thành các mảnh nhỏ. Tránh tác động từ các bên - đây là vị trí kính dễ vỡ nhất.

English

Before drilling make sure no water pipes or electric cables are located inside the wall where you want to drill.

Deutsch

Vor dem Bohren sicherstellen, dass an der entsprechenden Stelle keine Wasser- oder Stromleitungen in der Wand laufen.

Français

Avant de percer, s'assurer qu'il ne passe aucune conduite d'eau ou fil électrique dans le mur à l'emplacement où vous voulez percer.

Nederlands

Controleer voor het boren of er geen waterleidingen of elektrische leidingen in de muur zitten waar je wilt boren.

Dansk

Før du borer huller, skal du kontrollere, at der ikke er vandrør eller elledninger placeret indvendig i væggen det sted, hvor du vil bore.

Íslenska

Gakktu úr skugga um, áður en þú borar, að það séu engar vatnslagnir eða rafmagnsleiðslur staðsettar í veggnum sem þú ætlað að bora í.

Norsk

Før boring må du sjekke at det ikke finnes vannrør eller strømledninger i veggen der du vil bore.

Suomi

Varmista ennen poraamista, ettei seinän sisässä kulje vesi- tai sähköohtoja.

Svenska

Innan borrhning se till att inga vattenledningar eller elektriska kablar finns inne i väggen där du vill borra.

Česky

Než začnete vrtat do zdi, přesvědčte se, že v daném místě nevedou žádné trubky ani elektrické kabely.

Español

Antes de perforar, asegúrate de que no pasa por la pared ninguna conducción de agua o cable eléctrico donde vas a hacerlo.

Italiano

Prima di forare una parete, assicurati che al suo interno non ci siano tubi dell'acqua o cavi elettrici.

Magyar

A fal fúrása előtt győződj meg arról, hogy az adott falban nincsenek vízcsövek vagy elektromos vezetékek.

Polski

Przed przystąpieniem do wiercenia upewnij się, że w miejscu, w którym zamierzasz wiercić w ścianie nie ma żadnych rur wodociągowych lub przewodów elektrycznych.

Eesti

Enne puurimist veenduge, et kohas, kus soovite puurida, ei oleks seinas veetorusid ega elektrijuhtmeid.

Latviešu

Pirms urbšanas pārliecīnieties, ka sienā, kurā plānots urbt, nav ūdens cauruļu vai elektrības vadu.

Lietuvių

Prieš grēždāmi įsitikinkite, kad pasirinktoje grēžimo vietoje sienoje nėra vandentiekio vamzdžių ar elektros laidų.

Portugues

Antes de perfurar a parede, certifique-se de que não se encontra nenhum cano de água ou cabo elétrico na zona que pretende furar.

Româna

Înainte de a perfora, asigură-te că nu există țevi de apă sau cabluri electrice în interiorul peretelui pe care vrei să îl perforezi.

Slovensky

Pred vŕtaním sa presvedčte, že vo vybranom mieste m máre nevedú elektrické káble alebo vodovodné potrubie.

Български

Преди пробиване се уверете, че няма вградени водопроводни тръби или електрически кабели в стената, където искате да пробивате.

Hrvatski

Prije bušenja potrebno je provjeriti nalaze li se cijevi za vodu ili strujni kablovi u zidu kojeg treba bušiti.

Ελληνικά

Πριν τη διάτρηση βεβαιωθείτε ότι δεν υπάρχουν σωλήνες νερού ή ηλεκτρικά καλώδια μέσα στον τοίχο όπου θέλετε να τρυπήσετε.

Русский

Перед просверливанием отверстий необходимо убедиться, что в месте предполагаемых отверстий внутри стены не расположены электрические провода или водопроводные трубы.

Українська

Перед тим, як сверліти стіну, переконайтесь у тому, що в стіні немає труб водопостачання або електричних кабелів.

Srpski

Pre bušenja, proveri da se vodovodne cevi ili strujni kablovi ne nalaze u zidu na mestu gde želiš bušiti.

Slovenčina

Pred vrtanjem se prepričaj, da na izbranem mestu vrtanja ni vodovodnih cevi ali električnih vodnikov.

Türkçe

Delik açmak istediğiniz duvar içinde herhangi bir su borusu veya elektrik kablosu bulunmadığından emin olunuz.

中文

钻孔前，确保要钻孔的墙壁位置内没有水管或电缆。

繁中

鑽孔前務必確認牆壁內側沒有水管或電線。

한국어

드릴로 구멍을 뚫을 부분의 벽 안쪽에 수도관이나 전기 케이블이 없는지 반드시 확인하세요.

日本語

ドリルで作業をする前に、穴を開ける予定の壁の裏側に水道管や電気ケーブルが通っていないことを確認してください。

Bahasa Indonesia

Sebelum mengebor, pastikan tak ada pipa air atau kabel listrik yang terletak dalam dinding yang ingin dibor.

Bahasa Malaysia

Sebelum mengerudi, pastikan tidak ada paip air atau kabel elektrik terletak di dalam dinding di mana anda ingin gerudi.

عرب

قبل الثقب بالدريل تأكيد من عدم وجود أي أنابيب مياه أو كابلات كهربائية داخل الحائط في مكان الثقب.

ไทย

ก่อนใช้เจาะผนัง ควรตรวจสอบให้แน่ใจว่าไม่มีท่อ수가หรือสายไฟอยู่ในผนังบก่อนที่ต้องการเจาะ

Tiếng Việt

Trước khi khoan, đảm bảo không có ống nước hay dây cáp điện ở trong khu vực tường cần khoan.
